Cartago, Costa Rica

Professional Summary

Computer Engineer and Full-Stack Developer with +3 years of professional experience building and delivering web applications across healthcare, occupational safety, and business management domains. Skilled in designing scalable backend services, microservices, REST APIs, authentication systems, payment integrations, cloud storage solutions, and modern frontend applications using **.NET, Node.js, Vue.js, and Quasar**.

Proven ability to work across the full software development lifecycle — from requirements analysis and solution design to deployment and production support — within Agile Scrum teams alongside QA, product, and engineering stakeholders to deliver secure, reliable software aligned with operational requirements.

Professional Experience

J and G Solutions (Nov 2024 – Jun 2026)

Full-Stack Developer | Full-time (Remote)

Project: PuraVidaSafety — Occupational Health and Safety Platform

Technologies: .NET 8/9, Node.js, Vue.js, Quasar, SQL Server, Azure DevOps, Jira

- Provided +10 full-stack business modules from requirements analysis through production deployment, each estimated to save **+2h per workflow** compared to prior manual processes, serving 3 mid-sized client organizations.
- Designed and implemented +20 RESTful API endpoints, database models, DTOs, and service-layer components supporting user management, compliance tracking, reporting, and payment processing operations.
- Strengthened application security by implementing JWT authentication, role-based authorization, session management, and secure password recovery workflows, reducing unauthorized access risks across all platform modules.
- Led and executed the full integration of TiloPay payment gateway, supporting transaction processing and automated status synchronization across the application, which reduced manual reconciliation time by 40%.
- Implemented Excel import/export functionality capable of processing **+100 records per operation**, reducing manual data-entry time and minimizing operational errors.
- Improved application responsiveness through SQL query optimization and frontend performance enhancements, achieving a **20% reduction in loading times** across reporting, compliance, and administrative workflows.
- Supported CI/CD and deployment validation processes within Azure DevOps, contributing to stable releases.
- Resolved **+50 production incidents** at a pace of **+4 issues per day**, performing root-cause analysis and corrective implementations to maintain system stability across 3 client organizations.
- Partnered with QA and product teams across **+10 Agile sprints**, refining requirements, estimating tasks, and ensuring on-time feature delivery.
- Mentored **2 new team members** on project architecture, Git workflows, and development standards.

J and G Solutions (Jun 2024 – Nov 2024)

Frontend and Backend Developer Intern | Part-time (Remote)

Project: FisioFile — Clinical Records and Medical Management System

Technologies: .NET, Vue.js, Quasar, SQL Server, Azure Blob Storage, Azure DevOps

- Developed and maintained frontend features supporting patient management and clinical workflows for a system handling **+150 patient records** in production environments.
- Programmed **+10 data-entry forms**, dialogs, and validation schemas using Vue.js, Quasar, and Yup, improving data quality and reducing input errors across clinical workflows.
- Automated document management workflows by developing PDF generation, digital signature, and template-based

medical reporting services for **+150 patient records**, eliminating manual document handling and reducing document validation time by 1h per patient.

- Contributed to backend API development and business logic implementation, supporting patient records, medical reports, and document management operations.
- Investigated and resolved application defects by analyzing logs, reproducing issues, and implementing corrective solutions to maintain production stability.
- Collaborated with senior developers during sprints, code reviews, and technical design discussions across +10 Agile sprint cycles.
- Completed +15 features within Agile Scrum teams using Azure DevOps to manage development, testing, and releases.

Freelance / Independent Software Developer (Jun 2023 – Oct 2024)

Personal and collaborative projects — End-to-end web development

Technologies: PHP, Node.js, JavaScript, Angular, Bootstrap, jQuery, SQL, Figma, Visual Basic

- Built **+8 web application projects** end-to-end across personal and academic initiatives, independently owning frontend, backend, and database development for each.
- Architected and implemented REST APIs supporting CRUD operations, authentication workflows, and relational database integration across **+8 projects**.
- Delivered **+3 production-ready applications** including e-commerce platforms, task management systems, and administrative dashboards.
- Crafted responsive user interfaces using **+4 technologies** (JavaScript, Angular, Bootstrap, jQuery) applying responsive design, component reuse, and client-side validation techniques.
- Modeled relational database schemas across **+8 projects**, improving performance and long-term maintainability.
- Engineered desktop applications using Visual Basic, implementing data management and reporting functionalities.
- Managed **complete software development lifecycles** across +8 projects from requirements gathering and architecture through deployment and maintenance.

Education

Bachelor's Degree in Computer Engineering

Universidad Florencio del Castillo (UCA)

Certifications

Artificial Intelligence — Daxus Latam | **AI Development** — BIG School | **Python** — Daxus Latam |
AI for Life and Work — Silicon Valley | **100 AI Terms** — Silicon Valley | **AI Agents** — BIG School
Cybersecurity Basic — Universidad Braulio Carrillo | **Cybersecurity & Ethical Hacking** — BIG School
Web Development — Google | **English B2** — University of Costa Rica

Technical Skills

Languages: JavaScript, Python, PHP, Java, C#, SQL

Frameworks: Vue.js, Quasar, Node.js, Angular (basic), React (basic), Yup, .NET 8 and 9

Databases: SQL Server, MySQL

Tools: Git, GitHub, Azure DevOps, Postman, Figma, Sourcetree, Jira

Languages

Spanish: Native | **English:** B2 (Upper-intermediate — technical and conversational)
